LASER HAIR REMOVAL · TOP OF THE RANGE

Uriel Laser

2026 · AI

You no longer say no to anyone. And what you used to turn away, you now invoice.

Three wavelengths on the same handpiece: 755, 808 and 1064 nm. Dark skin and light hair, the two cases usually sent away, can be treated here. Up to 2000 W to cover large areas in fewer passes.

755 / 808 / 1064 nm

Up to 2000 W · 16 diodes

Camera + AI

Italian CE · MDR

THREE BANDS, THREE KINDS OF CLIENT

One handpiece for every skin.

755 nm

Fine, light hair

Catches the hair other devices leave behind.

808 nm

The workhorse

The band that treats most clients, every day.

1064 nm

Dark skin

Goes deeper and works safely on high phototypes.

IN THE TREATMENT ROOM

What changes for you, in practice.

More clients in the same day

500 W more than the Ares: full legs, back and abdomen in fewer passes, with the same result.

Stops less to cool down

Radiator, air and TEC cool together. More diodes means less strain on the device.

Parameters suggested, decision yours

Camera and AI software read skin and hair and suggest the setting. You confirm.

URIEL AND ARES AT A GLANCE

	Uriel 2026 · AI	Ares
Wavelengths	755 / 808 / 1064 nm	808 nm
Diodes	Up to 16 × 100 W	10 × 100 W
Power	2000 W	1500 W
Format	Trolley	Tabletop

TECHNICAL SHEET

The official data.

Feature	Uriel 2026 · AI
Type	Tri-wavelength diode laser
Wavelengths	755 / 808 / 1064 nm, up to 3 bands on the same handpiece
Diodes	Up to 16 × 100 W
Power	2000 W
Frequency	1–10 Hz
Emission	1–400 ms · macro channel
Cooling	Radiator + air + TEC cool
Interface	15" LCD touch
Camera and AI	Yes
Head	Titanium
Mains	AC 220 V / 110 V
Safety	Class 4 · interlock
Certification	Italian CE · MDR
Format	Trolley

CERTIFIED IN ITALY

Italian CE and active MDR.

It isn't an imported, re-badged device. Technical file, declaration of conformity and serial number are traceable: if an inspection arrives, you have a document to show with a name and an address behind it.

CLASS 4 LASER

A real laser, treated as one.

Goggles always, key and interlock that shuts the device down if anything is wrong. We teach it at delivery and check it at the exam.

THE NIPEC METHOD

A process that doesn't stop at delivery.

The device is just the beginning. What keeps a centre working is what comes after: the protocols, a trained operator, someone who picks up the phone. That's why we work in four stages.

01

Analysis

Before talking about devices, we look at your centre: who your clients are, how many treatment rooms you have, what an hour of work costs, what you already sell.

- Questionnaire and visit (or video call)
- Review of your price list and diary
- Where the margin you lose today sits

02

Design

Together we choose the right technology and build the treatment around it: prices, packages, session length, purchase formula.

- Device and configuration
- Treatment price list and packages
- Purchase or rental, with the numbers on the table

03

Training

Hands-on delivery in the treatment room and a staged path that ends with an exam. The operator leaves with a certificate valid for 12 months.

- Day 0 in the room, +7 follow-up, +21 online
- Exam at +45 days
- Protocols and rule cards, in Italian and Albanian

04

Ongoing support

After delivery we stay. A single contact for your centre, direct assistance and a monthly check to prevent device downtime.

- 10-minute monthly video call
- Parts replacement and logistics
- Launch marketing campaign

THE CERTIFICATION PATH

Day 0
Hands-on delivery

In the treatment room, on the centre's own device, with real clients.

+7
Follow-up

We correct the bad habits of the first week.

+21
Online

Advanced protocols and real cases brought by the operators.

+45
Exam

Practical test and a 20-question written test.

12 months
Certificate

Personal certificate to display in the centre. Renewed every year.

Start with the diodes you need today.

Diodes can be added as the centre grows, without changing device. We design the configuration together.

Let's design the configuration
